

Creating interest with native landscaping

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive technical assistance
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

functional features

A patio with an infiltration trench beneath can provide both a sitting area and water quality protection.

walk in the wild

Stepping stone pathways through native landscaped areas can be an invitation to explore new features of your landscape.

low maintenance

A thick layer of mulch provides less watering, no mowing and more time to relax and enjoy your healthy yard.

native plant beauty

Native plants come in many colors and sizes to form a beautiful garden all year round.

Add some excitement to your lawn!

Lawns can't absorb nutrients fast enough to keep them from washing away when it rains. Creating a landscaped area with a thick mulch layer and native plants reduces the amount of phosphorus in runoff by more than 80% and beautifies your yard.

Whether you're considering removing all or just portions of your lawn, native landscaping can provide interest, new features in your yard, and water quality protection. HIP reimburses up to \$1.60 per square foot of property that is converted from phosphorus-generating lawn to native landscaping; HIP can also provide reimbursement for landscape improvements that provide a water quality benefit.

What is meant by “native” plants?

Native plants are adapted to our environment, drought-resistant, require no fertilizer, and can establish themselves easily. There are more than 900 species of native plants—the following list shows some of the most common plants you’d find at your local nursery.

plant name	type	sun or shade?	wet or dry soils?	flower or leaf color	bloom time	deer resistant
Shore pine	evergreen tree	full sun	wet	light green	none	★
Vine maple	deciduous tree	shade	dry	red/orange	early	★
Blue elderberry	tall shrub	full sun	dry	white	mid-summer	
Red-flowering currant	medium shrub	sun or shade	dry	red/pink	earliest	★
Oregon grape	low shrub	shade	wet or dry	dark green	later	★
Kinnikinnick (bearberry)	ground-cover	sun or shade	dry	dark green	mid-summer	★
Blue-eyed Grass	grass-like	full sun	wet	blue-purple	mid-summer	
Orange honeysuckle	vine	part sun	dry	orange	later	★
Sword fern	fern	shade	wet or dry	dark green	none	★

1 Project Design*

- ✓ Define areas to plant
- ✓ Complete a plant list
- ✓ Choose your favorite mulch

2 Review and Approval

- ✓ Complete project application*
- ✓ Receive free permit

3 Construction & Installation*

- ✓ Spread mulch
- ✓ Install plants

4 Maintain your system

- ✓ Weeding and watering for two years until plants are established.
- ✓ Other upkeep activities unique to your project.

*A HIP-certified professional can be hired to help complete these tasks for you.

form and function

Native landscaping can be structured like any other landscaped garden, and provide the same aesthetic function. The bonus is the water quality protection benefit. You don't have to sacrifice the beauty and uses of your yard when including natives as part of your landscape.

Installing an underground pollution filter

Infiltration Trench

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive technical assistance
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

inviting spaces

A native plant border can create an aesthetic buffer between the patio and fence, framing the space to create ambiance.

invisible infiltration

Downspouts route water away from your home into a facility that improves water quality.

what pollution filter?

A patio disguises a water quality protection system. You can use your landscape creatively and protect Lake Whatcom.

Considering a new patio to enjoy those summer evenings on?

You can dine, relax, entertain, and protect Lake Whatcom water quality all at the same time! In some cases, an inviting patio can be designed and installed with an underground pollution filter beneath it—proving that HIP-eligible projects can be integrated into your dream yard.

HIP-certified professionals can help you design and install these and other improvements that are eligible for reimbursement—up to \$1.60 per square foot of property improved to protect Lake Whatcom.

How much space will my underground pollution filter take up?

It depends. Many factors, including soil permeability, the unique layout of your property, and the type of final surface you choose, influence the design principles used to calculate the system's size. It can be anywhere from the size of a patio you entertain on, to a walkway through your yard. A HIP-certified designer can determine the appropriate size you need.

options abound

© Jaime Hooper

A peagravel walkway can also function as an underground pollution filter. HIP-approved projects are easily combined with landscaping projects you might already be considering doing.

Rock and/or mulch can be used to cover the underground pollution filter to fulfill a variety of design aesthetics. How you want to utilize the aboveground space is typically the deciding factor.

1 Project Design*

- ✓ Confirm/test soil infiltration rate
- ✓ Choose location for filter
- ✓ Choose your surfacing material
- ✓ Lay out piping into and out of system

2 Review and Approval

- ✓ Complete application*
- ✓ Receive free permit

3 Construction & Installation*

- ✓ Dig out existing soil
- ✓ Place pipes and drains
- ✓ Install rock or sand
- ✓ Optional: place surfacing (gravel, pavers, river rock, etc.)

4 Maintain your system

- ✓ Keep pipes and drains clean and replace rock when needed.
- ✓ Other upkeep activities unique to your project.

*A HIP-certified professional can be hired to help complete these tasks for you.

Installing an underground pollution filter

Upland Filter

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive technical assistance
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

garden compatible

Relax and enjoy your garden with the assurance you are doing your part to keep Lake Whatcom clean.

room to play

Right next to this grassy area is a special rock and sand mix that filters pollution out of runoff from the surroundings.

invisible infiltration

A gravel garden feature disguises an underground water quality protection system. You can add interest to your landscape and protect Lake Whatcom at the same time.

Want a yard that provides enjoyment to you and clean water to our community?

Your yard doesn't need to look different to dramatically improve the quality of water entering Lake Whatcom. Underground pollution filter systems can be designed to treat the pollution running off of your property without interfering with the enjoyment of your backyard.

HIP-certified professionals can help you design and install these and other improvements that are eligible for reimbursement—up to \$1.60 per square foot of property improved to protect Lake Whatcom.

How much space will my underground pollution filter take up?

It depends. Many factors, including the unique layout of your property and whether you are using pipes to convey runoff into the water treatment system, influence the size of your project. A HIP-certified designer can determine the appropriate size of your underground pollution filter. Generally, though, filtering systems have a smaller footprint than other HIP BMPs, like infiltration trenches.

envision the possibilities

Placing a pollution filter system below ground allows you to maintain space in your yard.

Underground pollution filters provide a blank slate for your creative landscaping ideas.

1 Project Design*

- ✓ Choose location for filter
- ✓ Determine location of piping into and out of system, if applicable

2 Review and Approval

- ✓ Complete application*
- ✓ Receive free permit

3 Construction & Installation*

- ✓ Dig out existing soil
- ✓ Place pipes and drains if applicable
- ✓ Install special filter material

4 Maintain your system

- ✓ Keep pipes and drains clean and replace filter material when needed.
- ✓ Other upkeep activities unique to your project.

*A HIP-certified professional can be hired to help complete these tasks for you.

Installing Natural Drainage

Dispersion

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive technical assistance
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

yard enhancement

Your drainage trench can be designed to look like garden features such as dry creek beds and walkways to add interest to your landscape.

low maintenance

Landscaping with native plants allows more time to enjoy your yard with less work after plants are established.

forested privacy

Native forests and vegetation capture and recycle pollution in runoff from your property and can add privacy to your yard.

Your native forests and vegetation can clean the water running off your property!

Keeping your property dry and Lake Whatcom clean can be complimentary goals. Natural drainage systems direct water from your house and lawn to a dispersion trench (or buried rock-filled trench) that moves the water into vegetated areas.

HIP-certified professionals can help you design and install these and other improvements that are eligible for reimbursement—up to \$1.60 per square foot of property improved to protect Lake Whatcom.

What is meant by “native” plants?

Native plants are adapted to our environment, drought-resistant, require no fertilizer, and can establish themselves easily. There are more than 900 species of native plants—the following list shows some of the most common plants you’d find at your local nursery.

plant name	type	sun or shade?	wet or dry soils?	flower or leaf color	bloom time	deer resistant
Shore pine	evergreen tree	full sun	wet	light green	none	★

Orange honeysuckle	vine	part sun	dry	orange	later	★
Sword fern	fern	shade	wet or dry	dark green	none	★

the native plant advantage

Native forests and vegetation- together with a thick mulch layer- are a great place to direct polluted runoff from your property, improving your property drainage and our drinking water supply.

1 Project Design*

- ✓ Select location of planting area to receive runoff
- ✓ Choose native plants if necessary
- ✓ Lay out piping into and out of system

2 Review and Approval

- ✓ Complete application*
- ✓ Receive free permit

3 Construction & Installation*

- ✓ Dig out existing soil
- ✓ Place pipes and drains
- ✓ Add drain rock
- ✓ Install plants and mulch if necessary

4 Maintain your system

- ✓ Other upkeep activities unique to your project.

Installing a Lake Whatcom rain garden

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive technical assistance
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

© Stewardship Partners

enhance your yard

Enhance curb appeal while removing nutrient pollution from our community's drinking water supply.

create a sanctuary

Take a step away from your busy life into a relaxing garden retreat. Birds and butterflies will join you there.

reduce maintenance

Landscaping with native plants allows more time to enjoy your garden with less work.

Want to create beautiful gardens that filter pollution from your property?

Rain gardens add excitement to your landscape, help control runoff, and improve the quality of water draining from your property into Lake Whatcom. HIP-certified designers can help you craft your rain garden location, size, and plant composition while incorporating your preferences for the overall landscape.

HIP reimburses up to \$1.60 per square foot of property that filters phosphorus-containing runoff from roofs and driveways! Low maintenance rain gardens give you more time to enjoy your yard, attract beneficial pollinators, and help protect Lake Whatcom all at the same time.

How much space will my rain garden take up?

It depends. Many factors, including soil permeability, the unique layout of your property, and the amount of lawn and impervious surfaces your property includes, influence the system's size. A HIP-certified designer can help you determine the appropriate size and shape of your rain garden.

shape shifters

An asymmetric border, also functioning as a rain garden, adds interest to an otherwise monotonous lawn.

HIP-approved projects are easily combined with landscaping projects you might already be considering.

© Stewardship Partners

Rain gardens come in many shapes and sizes depending on the needs of your individual property. At right, a newly planted rectangular rain garden collects and filters runoff.
